

Specification

This guard is made up of marine grade Stainless steel SS 316 sheet with multiple layers of stainless steel mesh which act as a cushion in between the guard and the flange. Shield decelerates and diffuses the spray out without any pressure buildup in the shield.

Fastening System : Double lock with multiple slots for easy installation.

Flange Guards have been designed to avoid pressure building inside the shield and protection against lateral sprayouts.

All Flange shields are Reusable and easy to install.

Specifications:

Operational Temp : - 40 to 500 Degree Celsius

Sizes: 1/4" to 24"

How to Order :

- o Flange type, Class and Standard ANSI/DIN
- o Pipe Size
- o Quantity

Why Flange Guards ?

- o Safety of equipment and manpower
- o Govt/Industry regulations
- o Insurance requirement
- o Reducing hazardous zoned area
